## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-20, drawn to a cable modem for down-converting an electromagnetic signal having complex modulation wherein the first universal frequency translation module samples the electromagnetic signal at a rate that is a function of the in-phase oscillating signal and the first and second universal frequency translation module samples the electromagnetic signal at a rate that is a function of the in-phase oscillating signal.
  - II. Claims 21-31, drawn to a cable modem having a first and second universal frequency translation module wherein the in-phase oscillating signal causes the first universal frequency translation module to gate the first information signal and thereby generate a first periodic signal having a first plurality of harmonics and the quadrature-phase oscillating signal causes the second universal frequency translation module to gate the second information signal and thereby generate a second periodic signal having a second plurality of harmonics.
  - III. Claims 32-46, drawn a cable modem having a switch, a storage device and a control signal generator coupled to the switch.

2. The inventions are distinct, each from the other because:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention Group II has separate utility such as a cable modem having a first and second universal frequency translation module wherein the in-phase oscillating signal causes the first universal frequency translation module to gate the first information signal and thereby generate a first periodic signal having a first plurality of harmonics and the quadrature-phase oscillating signal causes the second universal frequency translation module to gate the second information signal and thereby generate a second periodic signal having a second plurality of harmonics. See MPEP § 806.05(d).

Inventions I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention Group III has separate utility such as to a cable modem having a switch, a storage device and a control signal generator coupled to the switch. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their recognized divergent subject matter and different searches are required for each group.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 2685

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
